Analytics Analysis

Now that Tiki has powerful Indexing features and options

- MySQL Index
- PHP Lucene
- Elasticsearch

http://www.youtube.com/watch?v=bMi2g3uEAxU#t=1272 ↗

We can now look at these features as much more then just a "better search engine". Being able to index large amounts of information and analyze

The current approach being experimented on is to use Kibana ↗ to query/display results from the ElasticSearch index, mainly events that are stored in the activity stream.
