Default Preferences to be changed

This is the responsibility of the [Profiles Team](#) (please join!)

Below should be all coordination work to change Default settings of the standard profile.

Here are changes proposed to the default installation profiles. Discussing this in a Wiki page can keep track of all complaints we receive and point to what really needs to be changed.

Where	Setting	Proposed change	Discussion
Parser	feature_wiki_paragraph_formatting	should it be y?	not a proposal, just a question
Wiki	wiki_badchar_prevent	y	because it causes issues with Short URLs
Admin General	Display menus as folders	Enable	Most problematic setting yet. I myself spent about an hour as Tiki admin not able to create much. I think the majority of new admins do the same, although recently it even led to the creation of an Assistant module. mose says historical reasons explain the current setting. Shouldn't we change it anyway? *Chealer9* ricks99 thinks that showing the folders is much more intuitive than the +/-. I like the folders **much** better.
SEO	feature_sefurl_title_article and feature_sefurl_title_blog	turn on if SEFURL is on	
Editing and Plugins	wiki_edit_icons_toggle	Should be off dy default	Because new users never find out about the very useful edit plugin helper
Admin Security	Add "rel=nofollow" on external links (feature_wiki_ext_rel_nofollow)	It should default to off	Site generally wants to give props to friendly sites. This was changed hoping it would slow down spam, but the spam problem needs to be dealt with anyways. 🚩
Search	*Exclude all plugins* (unified_exclude_all_plugins)	Disable (include all plugins by default)	Proposed by Marc Laporte. Chealer: I agree this should be done though perhaps some plugins should be excluded as [Marc wrote](#) ↗.

Settings other than global preferences (not in control panels)

Where	Setting	Proposed change	Discussion
Admin image galleries	Gallery is visible to non-admin users?	Enable	Someone just opened a bug report about that...this is probably not the first one to be confused. How many people leave that unchecked? *Chealer9*
User Preferences	Use double-click to edit pages	Disable	It is too easy for new users to enter editing mode by accident. — colorado
Image galleries & File Gallery	Other users can upload images to this gallery:	Enable by default	If I create an image/file gallery, why wouldn't I, by default, want people to add? It's a non destructive operation *marclaporte*

MyTiki:
Try a clean install. As of now, tiki-my_tiki.php is not WYSIWYCA on a clean install.
My Tiki (pages, tracker items, etc) should all be on by default.)
