Michiel

"

> *02:55 michiel_l: marclaporte: indeed it works nicely*
> *02:55 michiel_l: I've edited and saved a document successfully.*
> *02:56 michiel_l: w.r.t. the save options you might want to add some more possibilities: "Return to file menu" and "Save as "*
> *02:57 michiel_l: But of course what you now have is already a huge breakthrough!*
> *02:58 michiel_l: Have you considered using the thumbnail from an ODF file in the gallery view?*
> *03:00 michiel_l: And one final question: somehow I ended up with multiple versions of the same file ODT.odt*
> *03:00 michiel_l: It was not possible to distinguish between the two of them*
> *03:01 michiel_l: Maybe the file gallery should have the possiblity to show the time of saving?*
> *07:48 marclaporte: Yes, thanks for this feedback*
> *07:49 marclaporte: (This is exactly what we need)*

Todo ASAP

- Update with latest code from: https://gitorious.org/webodf ↗
  - Done 2013-05: http://sourceforge.net/p/tikiwiki/code/45963 ↗
- http://irc.tiki.org/irclogger_log/tikiwiki?date=2013-01-15,Tue&sel=38#l34 ↗ fixed: http://sourceforge.net/p/tikiwiki/code/45945 ↗

Todo list for 8

- Buttons
  - Add a download button
  - Add a "go to file gallery" button
- Add "edit properties" button ↗ of WebODF
- Add "edit properties" of Tiki File Gallery
  - Add a link to WebDAV editing (if webDAV is activated)
- Make page refresh go to most recent unless history is what is requested
  - Same issue we had with drawings
- Perhaps a cleaner interface for editing, so doc can be see
- ~~Improve~~ Category Transition profile ↗ ~~of how you could use Docs with~~ Category Transitions ~~to make a document workflow (with a customizable approval process).~~
- Ask before start, make contextual menu for docs show up on edit for this and draw

Nice to have for Tiki8

- After you edit an odt file with WebDAV, it's no longer possible to edit via WebODF (link is missing)
  - If I try to edit directly: "Wrong file type, expected application/vnd.oasis.opendocument.text"
    - http://demo.tiki.org/draw/tiki-file_archives.php?fileId=8 ↗ old files can be accessed by WebODF but not newest one (because it was edited via WebDAV)
- Add version locking

Todo eventually

- Side-by-side comparison (version history with playback)
  - We want this for images too
  - See note about "Change tracking demonstration ↗"

Questions

- In webODF, CTRL-B makes the text bold. So why not add a toolbar? ↗
- Are feature-checks and permissions all checked properly? (At one point, they weren't and user could see view/edit ODF even if feature was off)
- Should we have a docs plugin, to embed in wiki pages?

Who

- Robert Plummer
- Jos van dev Oever (of WebODF).
- Marc Laporte

2013-01-15 discussion

#webodf IRC 2013-01-15

(3:34:42 PM) The topic for #webodf is: http://www.webodf.org && https://lists.opendocsociety.org/mailman/listinfo/webodf (5:10:59 PM) peitschie: morrnin :) (5:21:21 PM) marclaporte: There has been a lot of work lately. Congrats! (5:27:39 PM) th: hey guys (5:27:54 PM) th: marclaporte: you refer to our latest push to gitorious? (5:28:04 PM) marclaporte: yes (5:28:27 PM) th: aye - we also try to keep the collaborate branch in fast-forward position with master (5:28:40 PM) th: sometimes we are forced to delay pushing to the public (5:28:51 PM) th: but in the end it will all be available (5:29:15 PM) marclaporte: So there has been a lot of new code since we integrated in Tiki (5:30:01 PM) marclaporte: So do we need to just replace these two files? http://sourceforge.net/p/tikiwiki/code/HEAD/tree/trunk/lib/webodf/ (5:31:05 PM) th: marclaporte: i think one change for you should be that .css is now integrated (5:31:26 PM) th: marclaporte: most (i guess _all_) editing code that materialized is irrelevant for you because you can still use content editable (5:31:58 PM) th: marclaporte: ack. webodf.css is obsolete and contained in webodf.js these days (5:32:02 PM) Jyhem_laptop [~libs@85-168-216-146.rev.numericable.fr] entered the room. (5:32:04 PM) th: so now only one file (5:32:15 PM) marclaporte: th: that is even better! (5:33:04 PM) marclaporte: so how is support for .odt vs .odp vs .ods ? (5:33:09 PM) th: marclaporte: also: the webodf build-process outputs a viewer.zip now. which contains all bootstrapping (5:33:22 PM) th: marclaporte: only minor improvements (5:33:32 PM) th: marclaporte: another new thing: there is a wordpress plugin now (5:33:38 PM) th: http://blog.thzn.de/wordpress/ (5:33:49 PM) th: (thats just an empty blog for demoing) (5:34:11 PM) th: the gray chrome there is part of the viewer.zip as well (5:34:32 PM) pedor [~quassel@187.114.0.122] entered the room. (5:34:32 PM) RobertPlummer [~robert@75-145-174-149-Illinois.hfc.comcastbusiness.net] entered the room. (5:34:40 PM) RobertPlummer: Hey guys. (5:36:58 PM) th: hi RobertPlummer (5:37:13 PM) th: tiki front waking up? (5:37:29 PM) marclaporte: RobertPlummer: see what you missed: https://dev.tiki.org/Docs#discussion (5:38:20 PM) RobertPlummer: :) (5:38:32 PM) marclaporte: th: http://irc.tiki.org/irclogger_log/tikiwiki?date=2013-01-15,Tue&sel=31#l27 (5:38:38 PM) th: oh i do feel logged now (5:38:41 PM) RobertPlummer: I'm impressed you are now parsing ods now. (5:39:15 PM) RobertPlummer: Are you building the editing interface yet? (5:39:30 PM) th: we were doing odt,ods and odp from the beginning (5:39:39 PM) RobertPlummer: jQuery.sheet, hint hint. (5:39:48 PM) th: RobertPlummer: we have simple collaborative editing for odt finished (5:40:08 PM) RobertPlummer: th, wow, bug free? (5:40:21 PM) th: RobertPlummer: of course not. nothing is bugfree. (5:40:37 PM) RobertPlummer: :) (5:40:39 PM) RobertPlummer: True (5:40:43 PM) th: RobertPlummer: it's not done yet. but i'm still very optimistic (5:44:24 PM) marclaporte: th: real time? (5:45:06 PM) th: marclaporte: yes (5:45:11 PM) RobertPlummer: I need to step away for a bit, I'll stay connected for the log. (5:45:12 PM) th: marclaporte: char by char (5:45:49 PM) marclaporte: th: what is technology? (5:46:29 PM) th: marclaporte: OT basically. nowjs as transport layer (but can be exchanged, we have tested http and pure ws as well) (5:46:48 PM) th: operations are sent to a server instance which broadcasts them to

clients in the session (5:46:55 PM) th: OPs are then replayed locally (5:50:01 PM) marclaporte: demo? (5:51:31 PM) th: not yet (5:52:05 PM) th: at least not publicly yet, we could probably arrange something in private at another time (when i'm in the office) (5:54:17 PM) marclaporte: Related to http://stackoverflow.com/questions/2043165/operational-transformation-library ? (5:56:22 PM) th: that is the OT i mean. no shared code though (6:01:01 PM) marclaporte: interesting
