MoveToMods30

[**Note from kerrnel22:** For those interested in making Mods a better place, please check out TKM Proposed Framework: Mods ...]

Here's a list started on tiki-devel which probably should be a poll (or quiz or a tracker or something...)

But for now - there's the list "the old way":

Features/libs that *have* been moved to Mods

## August 2009 update at the Barcelona TikiFest ☑

*In the end, due to lack of resources and support for any of these features, they have been removed from trunk and not, so far, added to Mods.*
These files still exist in the stable (3.0) branch if anyone needs them, or they could be rolled back from SVN if anything really *has* to be reinstated. (jonnyb)

- Mirror Trackers
  - I once proposed removal but some people requested to keep. And now?
  - jonnybradley: I tried for some time and found it too buggy to use - real world examples please?
  - MatWho: they are not necessary, "fix" trackers instead

Features/libs that *probably won't* be moved to Mods

- HTMLPages
  - ricks99: I use HTML pages as a way to "hide" pages/content from Tiki search and (multi)print features, but still make the content viewable.
  - jonnybradley: sounds like a new perm would be better?
    - Sure. How about a tiki_p_can_print, and tiki_p_can_search permission?
  - I made a change to the permissions a while ago and got very lost - too scary!
  - marclaporte: perhaps the new 4.0 workspaces would be a better way to do this.

Features/libs that *will not* be moved to Mods

- Commcenter
  - Sylvie G: "uses and maintains"
- ointegratelib
  - LPH: "veto - new and needed for webservices"
- HawHaw
  - marclaporte: I maintain mobile.tiki.org and have a few users.
- refererstats
  - marclaporte uses and thinks it should be improved
- minical
  - need data migration path to real calendar
- sheet (saved by examples)
  - Matwho: "please keep, might use it soon"
  - Can somebody who is using this feature now please tell us (give us a link would be great)
    - xavi: sheets are very good for wysiwyg tables!:
      - http://uniwiki.ourproject.org/aw1l ☑ ,
      - http://uniwiki.aia06.ourproject.org/sheet7 ☑, and
      - http://uniwiki.aia06.ourproject.org/sheet56 ☑
  - kerrnel22: Please keep - discovered an awesome use to this if we can add additional functions to

it (like SUM, SUMIF, COUNTIF, etc)...instant metrics site-wide!
- marclaporte: keep
- One day should be enhanced with the JQuery sheet plugin ☑ (more here ☑)
- graph-engine
  - Used by sheet
- wiki3d
  - marclaporte uses sometimes. Need to ask Batawata for updates
  - jonnybradley uses it but it is broken (2.0+) - will try to fix one day
  - also (jb) : tiki-browse_freetags.php uses it and it works there
- Webmail
  - Recently saved by GroupMail project so it won't be "just a mail client"

## Features that have to stay but must be brought up to scratch

- Mods (obviously!)

## Features/libs that should be merged

- File galleries (filegals)
  - Image galleries (filegals pretty well does this now, do the recent commits for thumbnail browsing work?) => yes ☐
  - Wiki images (wiki_up) - done?
  - Attachments (wiki/tracker/any more?) - coming soon...
- Questionnaires (Trackers?)
  - Polls
  - Surveys
  - Quiz
- Calendar
  - minical
  - Any others left?

---

## Any more for any more?

- pkdille: A "new one" that I just discovered : tikihelp (/lib/tikihelp). Seems to be broken. Last "real" commit (not a merge or a branching) is r2657 on 2003-11-23. It's probably time to remove this broken code...
  - marclaporte: I think it is WebHelp. I think you can remove. It's a good feature, but we can redo it later with much nicer interface (jQuery, etc)

Let's discussion continue on Endangered features
