Reduce disk space

Antoine de Saint Exupéry wrote:

Tiki contains a lot of files: Source Lines of Code. How can we reduce it while keeping it easy to host for a hosting company and Auto-installers?

Composer
- The vendor directory created by Composer is using a lot of disk space
  - http://sourceforge.net/p/tikiwiki/code/HEAD/tree/trunk/lib/core/Tiki/Composer/CleanVendors.php ↗ is used to remove unused files

Images
- Image Directory Revamp done
- http://www.smushit.com/ysmush.it/ ↗ which will improve Performance
  - Was done for Tiki 13
- Use vector icons instead of bitmaps !
  - Icons SVG or Fonts

Languages
- Tiki comes with 40 translations, but most sites need only up to handful.
  - The language files (at release time), only contain the actual translations and not the placeholders like in SVN. So there is not a big potential to save space.
  - We would need a web-based way to add translations.

Libs
- Review External Libraries so as to not include unused code, demos, docs or translations.

Other
- ~~changelog.txt weighs 5 megs and doesn't convey much. Could be changed to a link to tiki.org/Changelog, which we would control the redirect (for now, on SourceForge.net SVN)~~ done: https://sourceforge.net/p/tikiwiki/code/61464 ↗

Packaging script
- In the early days of Tiki, there was a script to package TikiLight which stripped translations and other things...: this idea could be re-activated to remove languages, themes, icons, fonts, etc.
