

Simpler config on Fresh install

This page should merge with [New Defaults](#)

This is the responsibility of the [Profiles Team](#)

Note here all the things that are visible on a fresh install, and confusing to new users, with the "basic" tag (in tiki-admin.php)

If there are seldom used, make them optional, and default to off

Advanced panels

- When creating things like forums, it should only ask a few questions in the main interface, and the rest should be hidden in an advanced panel.

Modules

- Should become prefs
 - Only commonly used and stable ones should be basic
 - Like plugins, the pref should be in the relevant place(s) in the admin panel

Permissions

Make the features for tiki_p_edit_dynvar, tiki_p_dsn_query and tiki_p_edit_cookies optional so the perms disappear from a fresh install.

Maybe a new section?

Content editing? Editing?

(tiki_p_edit_switch_mode)

(tiki_p_plugin_viewdetail) (tiki_p_plugin_preview)

(tiki_p_plugin_approve)

(tiki_p_use_HTML)

(tiki_p_admin_toolbars)

(tiki_p_detach_translation)

Other

- ~~tiki_p_delete_account should be in user~~
- 2 perms for wiki approval: 'scope' => 'global' -> 'scope' => 'object',
- 'name' => 'tiki_p_page_contribution_view' 'prefs' => array('feature_wiki'),

--Check if permission is OK to backport to 9x:

<http://tikiwiki.svn.sourceforge.net/viewvc/tikiwiki?view=revision&revision=40636> [done](#)--

File Gallery

- tiki_p_batch_upload_files should check for feature_file_galleries_batch
 - That's a different feature: tiki_p_batch_upload_files lets you upload and unzip zip files, only tiki_p_batch_upload_file_dir uses the batch directory feature
- ~~tiki_p_view_fgal_explorer (worth a feature check?) for 9.0~~
- ~~tiki_p_view_fgal_path (worth a feature check?) for 9.0~~

Features

Should be made into prefs

- Comments
- tiki-admin_external_wikis.php

Admin panels

- There should be a home icon to go from tiki-admin.php?page=look to tiki-admin.php
- tiki-admin.php?page=rating and tiki-admin.php?page=maps should be hidden when off (like other features and a feature check added with the other features
- If I search for a pref, but it's hidden in "advanced", it should tell me
