

Wiki 3D

Morcego 3D network browser is a java applet which was the best way to do this in 2004. Now, it's time to replace with an HTML5 solution. See [Visualization](#) and [WebGL](#).

Morcego is a 3D graph browser for viewing and navigating any graph-like structure. Examples of such structures include social networks, site maps, hierarchies, and genealogy trees. It currently only support simple graphs. It's already integrated into TikiWiki. Morcego is not meant to provide a solution for the end user, but to be embedded in a Web application by developers. It's a Java applet that communicates with an XML-RPC server to load the graph that is displayed.
