

jQuery Gantt editor

Coordination page about the addition of <https://github.com/robicch/jqueryGantt/> to Tiki19 as [PluginGanttChart](#)

Bugs & Wishes

Open or Pending

No results for query.

+ Create Item

What we want

- Data is stored in trackers
- [PluginGanttChart](#) will use the unified search index as a data source (like [PluginTrackerCalendar](#) or [PluginPivotTable](#)).
 - So same data can be used / viewed in other ways
- jQueryGantt permits editing and thus, this should update tracker data

Details

- What is the plan to deal with sub-tasks? Item link? Relations field?
simplest setup (and maybe good enough):
 - project = category.
 - task: tracker item
 - child task (from hierarchical point of view in Gantt Chart): another item of the same tracker, with: relations field.
 - parent task: as before, but info in another relation field "Parent task".

item link could be for linked items in the timesheet, if needed. Invoiceable items, etc.

Related

A former hack-like implementation that was never committed to trunk svn, and thus, became obsolete quickly, but maybe some ideas can be taken from there?

- [TrackerToGanttChart](#)

And [PluginTrackerCalendar](#)

“

The commercial version has been always a step forward the open source one, so after two and half years the gap becomes unbridgeable and I needed time and funds to ferry the open source component to the new world

Thanks to WikiSuite, that funded the alignment, the new version has finally seen the light.
